POWERBOX Defense Line
DAA/DAB/DAC Series
150W to several kW
DC/DC Conduction cooled

Description

The DAA/DAB/DAC, very compact DC/DC converter in chassis mount format, incorporates input filtering, input and output protections, very robust mechanical mounting and connection, optional conformal coating, required in most of the severe environment for industrial, railways, defense type of applications. The converter provides high reliability, high efficiency, input-to-output isolation, soft start, overtemperature protection, input over/undervoltage lockout. The converters wide range of inputs are protected against surges and transients and EMI filtered. The outputs are continuously short circuit proof. The 100°C baseplate operation allows operation in high temperature environment. The output can be configured in many different output voltages from 3V3 to 48VDC, can be put in series and parallel, others possibilities are even possible as semi-standard versions. Wide range of accessories like input & output Bus bars, N+1 oring diodes, parallel cables are available to simplify multi units assemblies. Military options (M) make it suitable for MIL STD compliance.

Features

12, 24, 48, 72, 110VDC in

3 packages 150, 300W, 500W

Output from 3V3 to 48VDC

Input filtering EN55022 & transient protection

Reverse polarity protection

Several outputs, parallel or series operations up to several kW

MIL-STD1275, 461, 810, 704 options

Safety built to meet IEC/EN62368-1, ROHS lead-free-solder compliant

Options

Heatsink (H)	The unit is built as standard with a aluminum baseplate as described in the mechanical data. The converter can be delivered with a 15mm heatsink.
Ruggedized (M)	The unit can be ruggedized to meet MIL-STD810E, MIL-STD461E CE102. M option with 12 and 24Vin will comply with MIL STD 1275A on DAA and DAB only.
-40°C operation (T)	The thermal grade of the components are comply with low ambient temperature.
Conformal coating (V)	During manufacturing process components and pcb are covered with an acrylic coating to address high level of ambient humidity application.
IP-Enclosure (IP)	Built in IP65 sealed enclosure.

Input

Electrical input data	See table
Input fuse	A fuse mounted inside the converter protects against damages in case of a failure. The fuse is not user-accessible.
Input transient protection	A VDR (Voltage Dependent Resistor) and a common mode input filter form an effective protection against input transients in severe environments like railways. When M option is defined for DAA500 and DAB300 Series, the unit is incorporating an active protection against high energy transient MIL STD 1275, DO160.
Input reverse polarity	A diode placed internally across the input will cause the fuse to blow in case of a reverse polarity of input voltage.

Accessories

Input parallel bus bar with capacitor footprints	The input bus bar simplifies the assembly of 2 or 3 units. It includes input extra capacitor footprints for application with long lenght from the source to the converter.
Output parallel bus bar	Available for 2up & 3up versions, it connects together the differents positive outputs as well as negative output.
Output serial bus bar	It connects the negative of the first unit with the positive of the second to create high voltage configuration.
Output N+1 bus bar including diode	From 1up to 4up, this accessory puts in parallel the outputs with the addition of an oring diode mounted on an aluminium bar.
Inhibition and parallel cable	These 50mm cables allow unit to current share in parallel and allow the user to inhibit all units at the same time.

Installations

These converters are components, intended exclusively for integration into other equipment by an industrial assembly process or by a professional competent person. Installation must strictly follow the safety regulations in respect of the enclosure, mounting, creepage and clearance distances, markings of the end-use application. Connection to the system shall be made via appropriate connection. The +Vin is internally fused. This fuse is designed to protect the converter against overcurrent caused by a failure, but may not be able to satisfy all requirements. External fuses in the wiring circuit to one or both input pins may be necessary to ensure compliance with local requirements. Do not open the converters, or the warranty will be invalidated. Make sure that there is sufficient heat dissipation available for conduction cooling. This should be verified by measuring the case of temperature at the specified measuring point, when the converter is operated in the end-use application.

Designed/Built to Meet Standards and approvals

The converters are built to meet. 'Built to meet' mentioned in the different paragraphs of the datasheet means that the product is designed to meet the standard but not certified it in a laboratory. The installation is an important factor to fulfil EMI, electromagnetic immunity and emission for that reason the product shall be validated in its final application as additional filters may be needed.

Output Data DAA Series

General conditions : 25°C ambient. 1) Recycle input voltage or inhibit to restart (>100ms off) - 2) Output voltage 95 % of nominal - 3) Output voltage < 250mV - 4) Nominal input, full load, 20MHz bandwidth - 5) No load to full load, nominal input
